# TempaGlass™

THE CHOICE IS CLEAR

## TempaGlass™

At five times stronger than regular glass, **TempaGlass™** is Grade-A safety glass, ideal for commercial spaces that come into contact with large numbers of people and residential areas where safety glass is required.

Its strength is both heat and wind resistant, making it perfect for large storefront and facade designs. Even if an incident does manage to break it, **TempaGlass™** is designed to break into small grains of glass instead of large shards which may cause further injury.

The strength and durability of **TempaGlass™** can be used together with our other glass products to produce glass units that are both incredibly tough and your choice of energy efficient, noise blocking and designer aesthetic properties.

**TempaGlass™** is super strong safety glass, made to withstand everyday contact with people in high traffic areas.

### Made Extra Tough

**TempaGlass™** is five times stronger than regular glass.

### Safety First

If **TempaGlass™** does happen to break, it shatters into many small, granular pieces of glass, reducing the risk of further injury that can come from large pieces of glass shards.

### Ideal for Large External Panels

**TempaGlass's™** strength, heat resistance and wind resistance make it the first choice for large outer panels, whether for preserving views or as part of your building's design aesthetic.
