

GLASS MARKET

StrataLam™

THE CHOICE IS CLEAR

StrataLam™

If you're looking for a great all-rounder glass that can suit a range of applications, look no further than **StrataLam™**.

As a high-quality laminated glass, **StrataLam™** is a balanced combination of durability and versatility. It's Grade A safety glass: with an interlayer between multiple bonded sheets of glass, that means it resists breakage in the event of impact, preventing dangerous glass fragments from coming loose.

StrataLam's™ construction also makes it more resistant to UV and noise transmission compared to regular glass, giving it the versatility to serve in a range of residential and commercial applications, from windows, doors and partitions to overhead glazing.

StrataLam™ is a high performance laminated glass - durable enough to withstand a range of conditions, but flexible enough for a wide number of external and internal applications.

Safety First

StrataLam™ resists penetration and, in the event of breakage, holds glass pieces in place to greatly reduce the potential for further harm.

UV Resistant

StrataLam™ is more resistant to UV radiation than standard glass, helping to slow the rate that interior furniture, paint and finishes fade under direct light.

Noise Resistant

By providing a higher level of noise dampening than ordinary glass of the same thickness, **StrataLam™** can also be used to make spaces more private.
