Serenity™

THE CHOICE IS CLEAR

Serenity™

Serenity™ is Grade-A safety glass, designed to make your work or living space into a sanctuary, no matter where it is. Whether it's next to busy streets or experiences extreme weather, once you step inside it's a place where external noise fades away.

Serenity™ is ideal for homes and commercial spaces that receive frequent unwanted noise. It is particularly effective on sounds in the 1000-3500Hz range, reducing audible disturbances that the human ear is sensitive to. It can also be combined with thermal products, ensuring it reduces both unwanted sound and extreme temperatures. That means you can work, play and relax in your space without the need for excessive pressure on active temperature control systems.

For spaces prone to disturbance from the outside, **Serenity™** keeps the inside feeling just right.

Your home is a sanctuary with **Serenity™** noise reducing glass. Its acoustic interlayer keeps the noise outside, and it combines well with thermal products to shield your space from extreme temperatures.

Acoustic Interlayer

A thin layer of clear, sound-reflecting material works to effectively dampen noises from a broad set of frequencies within the human hearing range.

Tested & Certified

Serenity™ has been professionally tested and is Grade-A safety glass.

Reduced UV Fade Rate

Serenity™ also reduces the amount of UV sun radiation allowed inside, in turn slowing the UV colour fading effect on interior walls, floors, furniture and other belongings.
