# TempaGlass™ HS

THE CHOICE IS CLEAR

## TempaGlass™ HS

For places where the integrity of your glass needs to withstand the weather but not frequent contact with people, **TempaGlass™ HS** fits the bill exactly.

Used whenever the building specification requires heat-strengthened glass, **TempaGlass™ HS** is significantly stronger than regular glass, and offers heat and wind resistance. This makes it perfect for exteriors, facades and curtain walls, where its flat finish adds an aesthetic quality to the building and preserves views with less visual distortion.

In the event of breakage, **TempaGlass™ HS** breaks into larger pieces that are more likely to remain in the frame, offering a degree of safety in an accident.

**TempaGlass™ HS** is heat strengthened glass which is double the strength of regular float glass. It excels in outdoor applications where heat and wind resistance is a factor, and it's sought after for its aesthetic flat finish.

### Heat Strengthened

The manufacturing process involves heating **TempaGlass™ HS** to roughly 650°C, making it twice as strong as regular glass units.

### Heat and Wind Resistance

The strengthening process gives **TempaGlass™ HS** heat and wind resistance properties, making it ideal for building facades and curtain walls.

### Flat Finish

**TempaGlass's™ HS** sleek, perfectly flat finish provides an extra dimension of aesthetic quality to the building and keeps views looking pristine with reduced visual distortion.
