

GLASS MARKET

InspiraTint™

THE CHOICE IS CLEAR

InspiraTint™

InspiraTint™ glass protects your building from uncomfortable heat levels by greatly reducing the level of solar heat gain.

Under our Australian sun, the level of heat absorbed by buildings often needs large amounts of insulation or costly active cooling systems to keep much of the building usable during the day.

InspiraTint™ absorbs the sun's heat before it enters the building, reducing the need for insulation and cooling systems.

Available in a range of different colours with different levels of solar heat reduction, **InspiraTint™** does this while minimising the level of reflected solar glare, keeping your building comfortably protected and aesthetically pleasing.

InspiraTint™ delivers exceptional heat management through reducing direct solar heat gain. This improves comfort levels of occupants and aesthetic appeal of the building while cutting down the load on energy hungry active cooling systems.

Energy Efficient

InspiraTint's™ excellent solar heat protection reduces the need for costly active cooling systems throughout the building.

Improves Liveability

In addition to passively managing comfortable internal temperature, **InspiraTint™** is an aesthetically pleasing way to augment traditional insulation.

Range of Tones

We have a range of different glass tones available to suit your local climate, with darker colours offering more solar heat protection.
