SanctaGlass™

THE CHOICE IS CLEAR

SanctaGlass™

SanctaGlass™ helps to keep the internal climate of your building stable and comfortable all throughout the year.

By applying our low- E coating, SanctaGlass™ provides high thermal insulation from the outside heat and cold, keeping your building warmer in winter, cooler in summer, and taking the burden off of active heating and cooling systems. SanctaGlass™ can be manufactured into an IGU to further improve the building and suit the local climate.

Further upgrade options are available, such as laminating, toughening and heat strengthening to improve safety and security performance with SanctaGlass™.

Experience controlled comfort in your building with SanctaGlass™ low emissivity glass. With glass that reflects outside heat in summer and traps heat inside in winter, you can live in year round comfort.

Outstanding Energy Efficiency

SanctaGlass™ cooperates passively with your active heating and cooling systems to maintain home temperatures and reduce energy costs significantly.

Low E-value Coating

Our specialised low-E coating provides for better U-values and reduced solar heat gain for more consistent temperatures throughout the building for longer.

Customisable To Spec

SanctaGlass™ comes in a range of thicknesses and can be incorporated into our range of products to comfortably handle whatever your local climate can throw at it.
