SanctaShield™

THE CHOICE IS CLEAR

SanctaShield™

Lower energy bills without sacrificing natural sunlight in the home with **SanctaShield™** insulated glass units, specially designed to passively manage and maintain temperature levels indoors.

SanctaShield's™ clever design comprises of an insulated glass unit (IGU) with low-E glass to block heat transmission and help maintain ambient temperatures, whether it's from outside to inside or vice versa. This reduces the load on costly active heating and cooling and preserves ambient temperature levels inside the home for longer. It also provides for more even temperatures throughout the home and expands usable space by reducing the potential for hot or cold spots near windows.

Doing this without blocking levels of natural sunlight means the added comfort and energy savings from **SanctaShield™** are an unmissable investment for any home.

SanctaShield™ delivers outstanding energy efficiency with insulated glass units designed for minimal heat transfer. Keep the inside cool on summer days and warm on winter nights and watch as energy bills from heating and cooling drop throughout the year.

Outstanding Energy Efficiency

SanctaShield™ cooperates passively with your active heating and cooling systems to maintain home temperatures and reduce energy costs significantly.

Low E-value Coating

Our specialised low-E coating provides for better U-values and reduced solar heat gain for more consistent temperatures throughout the building for longer.

Designed for Homes

SanctaShield™ is specially designed to suit living spaces, allowing for bigger windows to support the overall liveability of your home.
