SanctaGuard™ Plus

THE CHOICE IS CLEAR

SanctaGuard™ Plus

SanctaGuard™ Plus is designed to improve your energy efficiency when it comes to passively managing comfortable temperatures in your building.

With the Low-E coating reducing solar heat gain and the double glazed insulation trapping ambient heat transfer before it enters the building, SanctaGuard™ Plus offers a significant improvement over regular glass when it comes to managing heat. This gives your building a superb defence against extreme temperatures and helps to greatly reduce the load on costly active cooling systems.

Ideal for commercial and residential buildings in areas prone to extreme temperatures, SanctaGuard™ Plus allows you to strike the perfect balance between aesthetics and comfort.

SanctaGuard™ Plus is the next level in passive heat management for your building. By combining a Low-E coating and double glazed insulation, it offers unrivalled reduction in heat transfer.

Superb Energy Efficiency

SanctaGuard™ Plus combines Low-E coating and double glazed insulation, working with your active heating and cooling systems to maintain comfortable temperatures and reduce energy costs.

Low-E value coating

Our specialised Low-E coating provides for better U-values and reduced solar heat gain for more consistent temperatures throughout the building for longer.

Fully Customisable

SanctaGuard™ Plus can be used in conjunction with our other products to produce superior energy efficient glass with even more safety, security, noise blocking and aesthetic qualities.
