Truvis™

THE CHOICE IS CLEAR

Standard

Truvis™

Truvis™

Truvis™ is just as it sounds - crystal clear and with great light transmission, made to appreciate the views that matter.

From its lower iron content (relative to levels present in other types of glass), Truvis™ eliminates the subtle green tint that interferes with spectacular views. While natural applications range from building facades and balustrades, it also has a range of commercial applications for display cases, shelving and furniture. It can also be combined with our **Tempa Colour** products to produce coloured glass with true colour fidelity without that green tint.

Finally, while the tint in other glass types increases and gets darker for thicker specifications, Truvis's™ ultra clarity remains constant no matter the thickness required.

See the world as it is with Truvis™ ultra clear glass. With impeccable clarity that allows the maximum amount of light transmission, this is stunning glass that looks as if it's not even there.

Crystal Clear

Truvis™ delivers exceptional visual clarity and light transmission, ensuring spectacular views remain spectacular.

Durable

When Truvis™ is toughened, it can be up to five times stronger than regular glass types.

Energy Efficient

While prized for its clarity, the high light transmission of Truvis™ also aids in passive solar heat gain - an added benefit in winter and colder climates.
